NOMA[®]STONE

Decorative synthetic wall panels
for interior and exterior use

The high quality NMC products have long since positioned NMC as a specialist in interior decoration. The vast range of products includes mouldings, rosettes, alcoves, window sills as well as decorative beams.

The NOMA®STONE range now perfectly complements the NMC products.

The NOMA®STONE wall panels are made of polyester resin reinforced with fibreglass, and offer a natural stone look. The panels measure 3.34m x 1.33m, and being weather resistant are also suitable for exterior use.

A special characteristic of NOMA®STONE panels is that they are quickly and easily installed. The panels are simply screwed to the wall; the joints are filled with a special joint compound and painted with the appropriate colour after drying. In very little time, the synthetic wall panels take on a natural stone appearance.
