DRAW ON OUR KNOWLEDGE AND EXPERIENCE

LET'S TAKE CARE OF OUR ENVIRONMENT TOGETHER

- Reduction of solar exposure and energy consumption.
- Effective production processes and waste reduction.
- Recyclable materials.

MORE THAN

230 PATTERNS OF METAL ARCHITECTURAL MESHES AND GRIDS

WIDE RANGE OF MATERIALS

Stainless steel, low carbon steel, galvanised steel, copper, brass, bronze, aluminium, Pro-ZINAL®.

FINISHING AND COLOURS

Full RAL palette, HWF and PVDF custom colours, anodising.

PERSONALISED IMPRINT

Logo or personalised artwork directly on the mesh / grid.

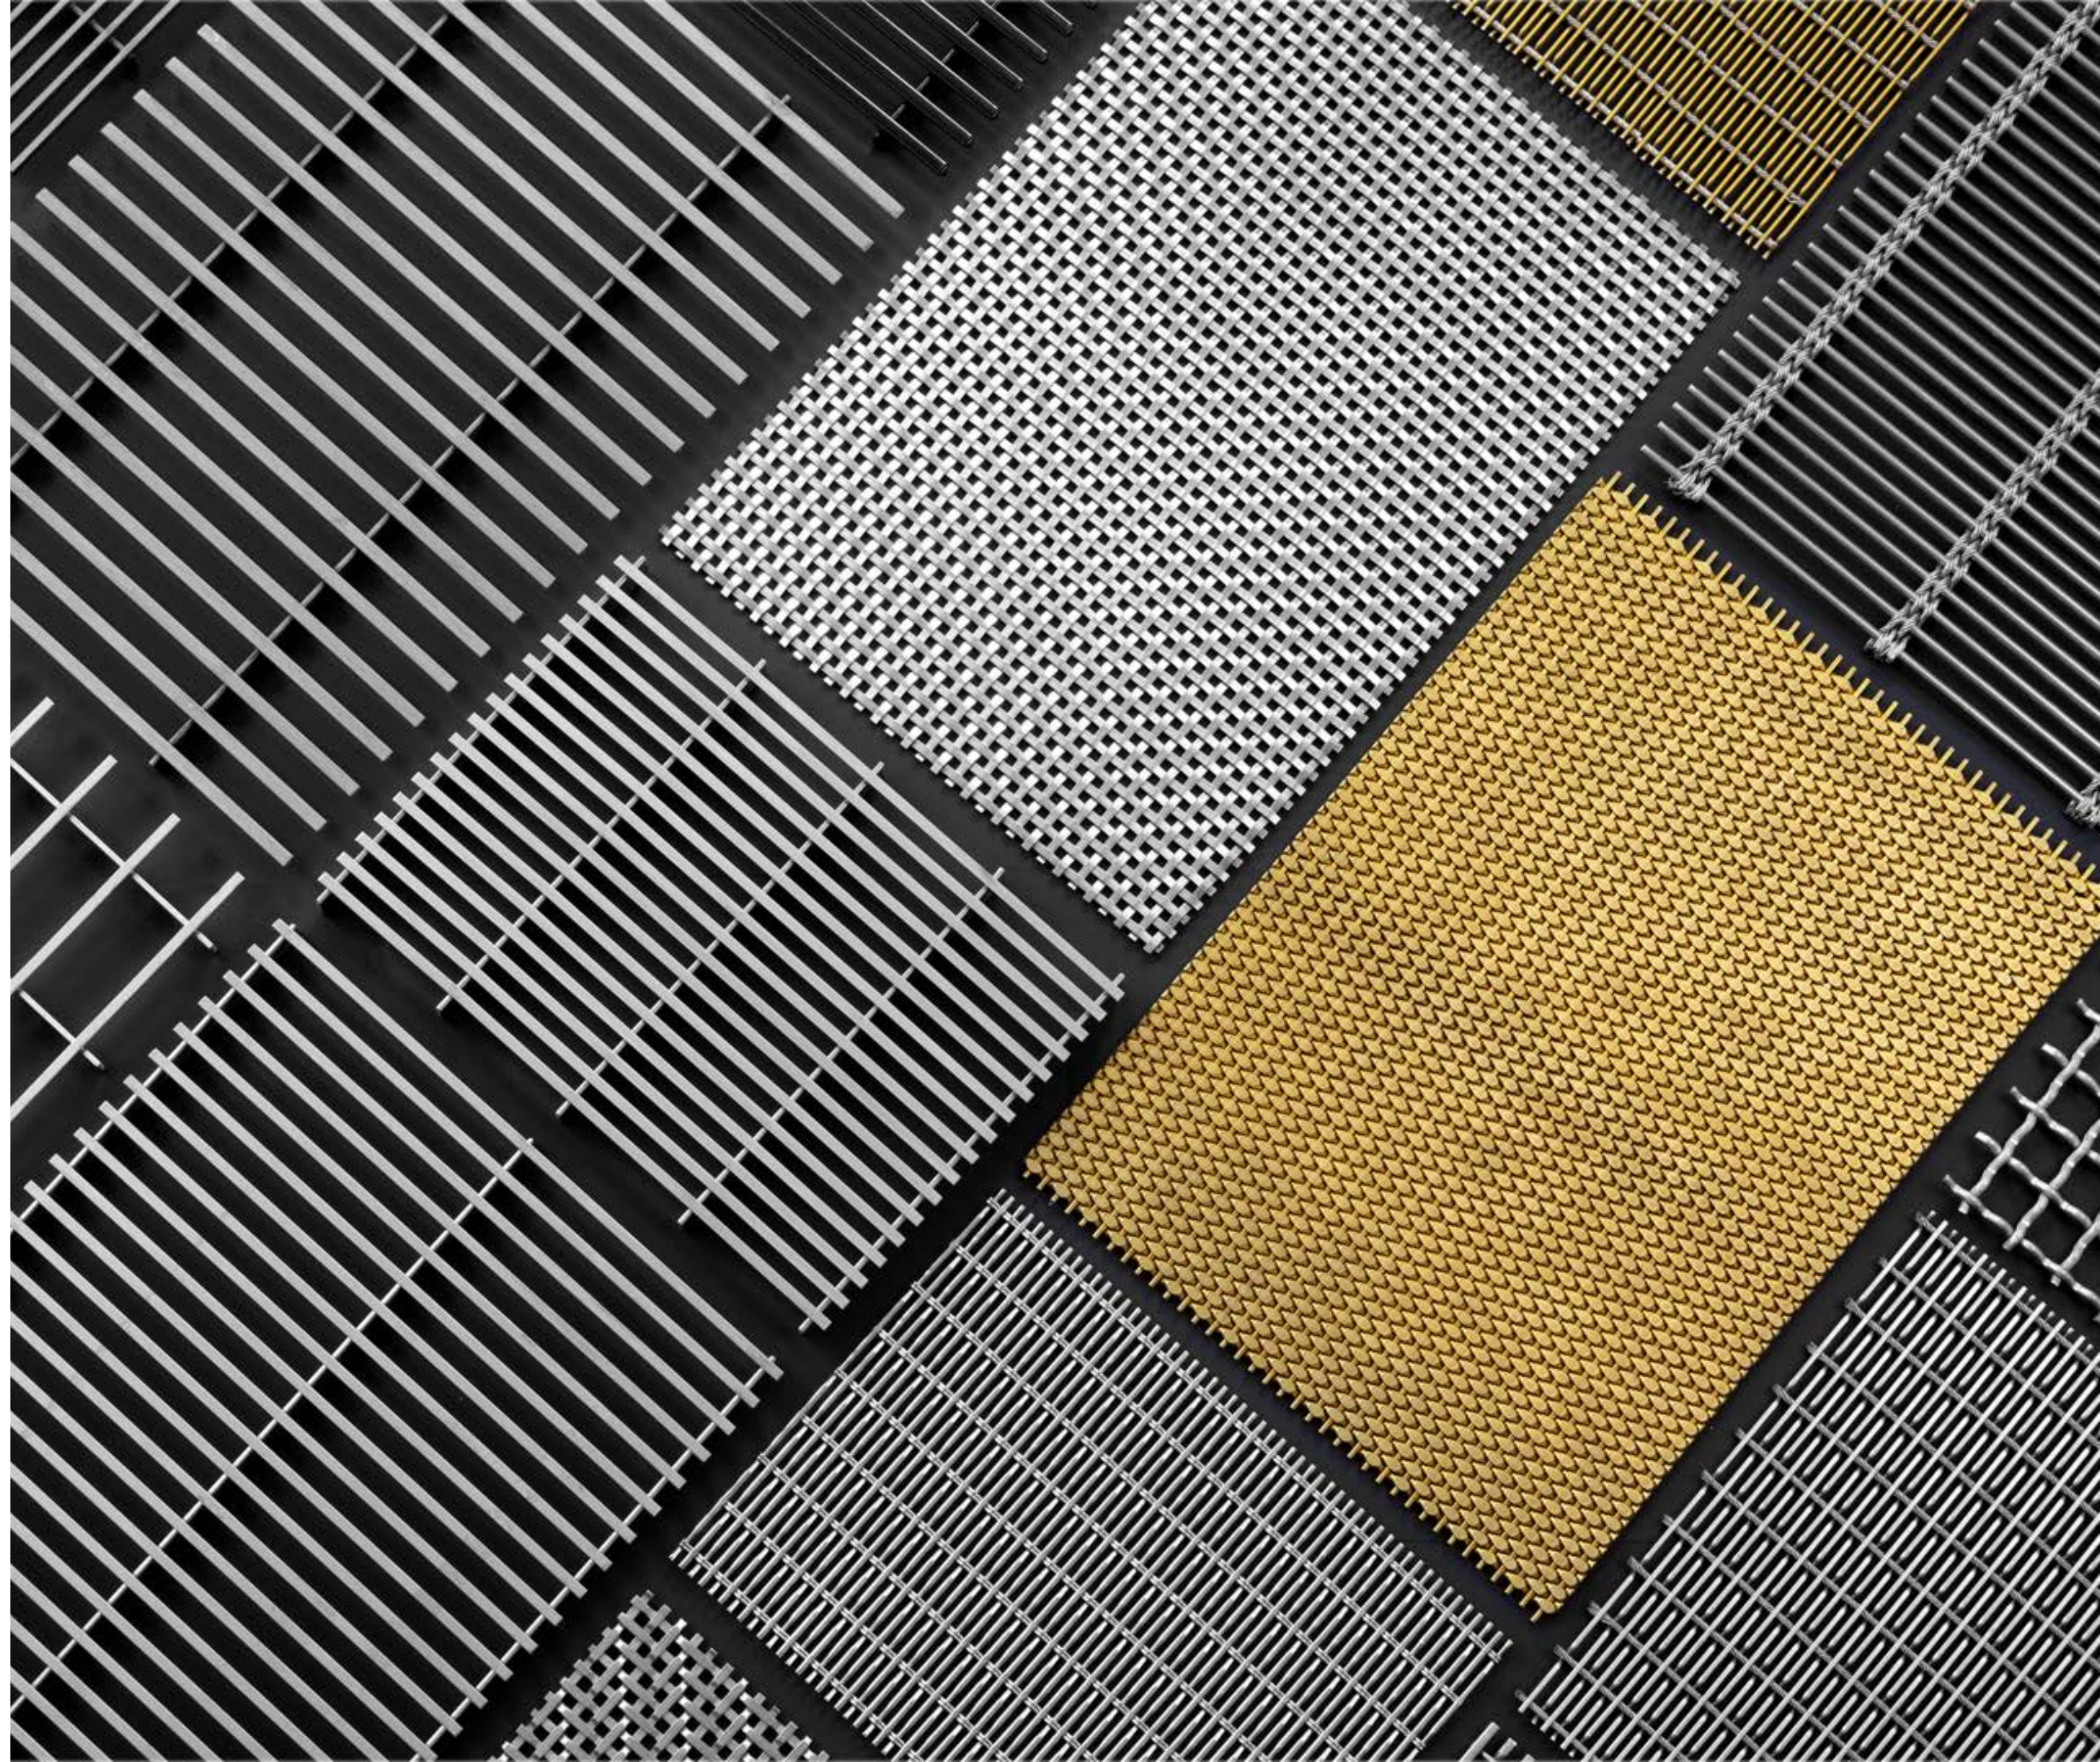

LARGE FORMAT PANELS

Up to 4 m wide and 30 m long.

HIGH RESISTANCE

to mechanical damage and changeable weather conditions.

WHY PROGRESS ECO?

EXPLORE THE BENEFITS

UNIQUE DESIGN

Transparent nature of metal meshes and grids allows you to create unique spatial effects.

EFFECTIVE VENTILATION

The open-work structure allows you to take advantage of the natural air circulation and provides effective ventilation of the facade walls.

SOLAR PROTECTION

Adequate shading reduces the level of heating on the facade, reduces energy costs, and does not restrict the view from the inside.

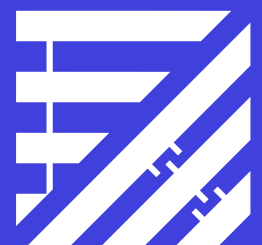

SUSTAINABLE USE

Thanks to the high resistance to weather and mechanical damage, the long-lasting effect does not require additional maintenance and investment.

FLEXIBLE SOLUTIONS

The right choice of designs, parameters, materials, finishes, and fastening systems allows you to stick to both the design and the budget objectives.

PROGRESS
ARCHITECTURE

METAL FACADES

Framed and tensioned systems dedicated
to the ASTRO WAVE woven mesh

TENSIONED SYSTEM

ASTRO STRETCHED

Use large-area mesh panels. Give facades unique spatial effects and provide them with effective sun protection.

The STRETCHED tensioning system makes it possible to tension woven meshes with rope in any plane. It consists of top and bottom fixings and intermediate brackets. There are dedicated types of fixings for each model of mesh. Adequate mesh open area ensures optimal shading. Natural ventilation of the facade reduces the risk of overheating of the inter-facade space in double layer facade construction.

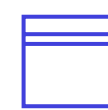

Can be imprinted with any graphics and colour.

Max. panel size:
4 000 × 30 000 mm.

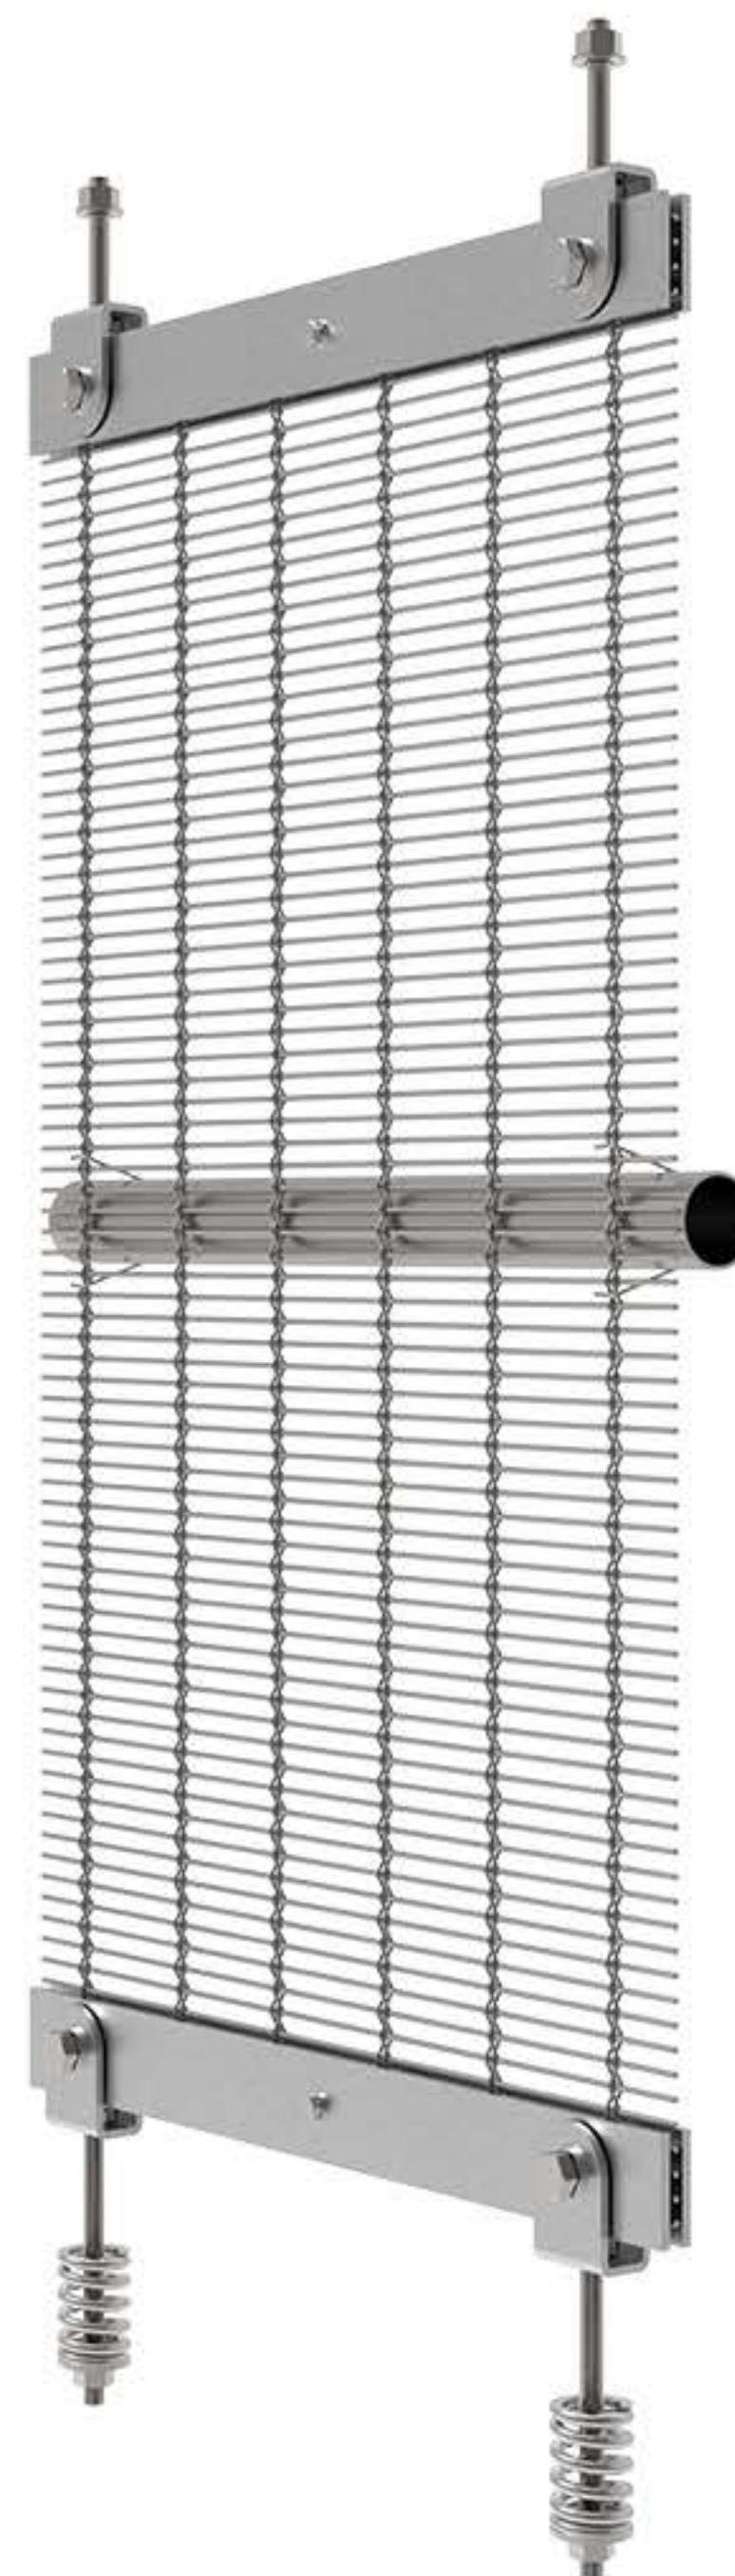

Natural inter-facade ventilation.

Open area:
20-95 %.

Spatial
3D effects.

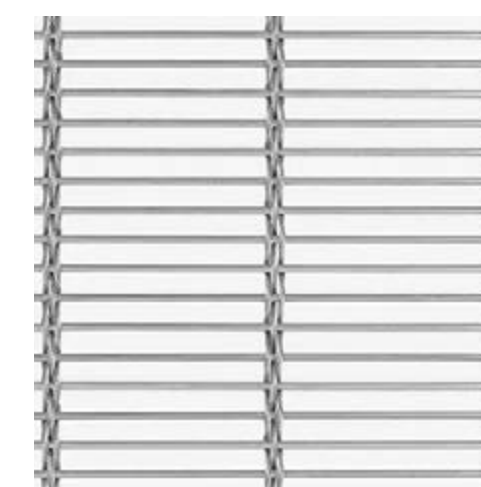

FIXING SYSTEM EXAMPLE FLAT BAR Fixing type

ASM Clermont Auvergne

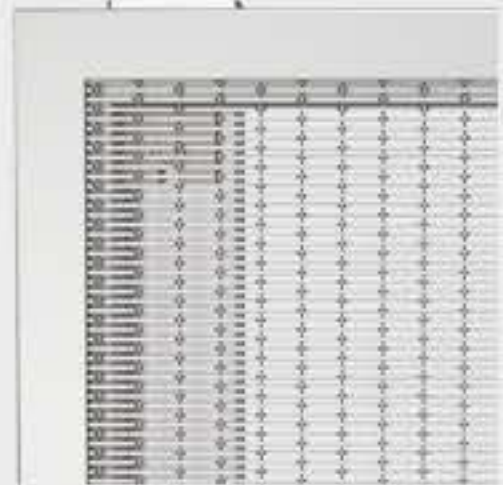

Location **Clermont-Ferrand / FRANCE**
Mesh **VIRGO P07030**
System **STRETCHED**

Product: steel woven mesh
VIRGO P07030.
ASTRO product line.

Frame made of stainless steel.
Mesh stretched over the frame.

Frame made of stainless steel.
Mesh inserted into profiles.

Mesh pattern sample

Woven mesh with a rope
AQUARIUS P10011.

FRAME SYSTEM

ASTRO FRAMED

Put different patterns of architectural mesh formats together. Arrange a unique composition. Give the facade an original and durable character.

The frame system FRAMED allows for the attachment of woven meshes made of round or flat wires. The mesh can be fixed in the frame or on the frame. Depending on the function and desired visual effect, the panels can have different infills, formats, and shapes. Hanger substructure as in classic ventilated facades. Natural ventilation of the façade reduces the risk of overheating of the inter-facade space in double layer facade construction. The system makes it possible to plug the panels into post and beam facades and element facades.

Ability to use **different mesh patterns** on a single facade.

Can be imprinted with any graphics and colour.

Max. panel size:
4 000 × 3 000 mm.

Natural inter-façade ventilation.

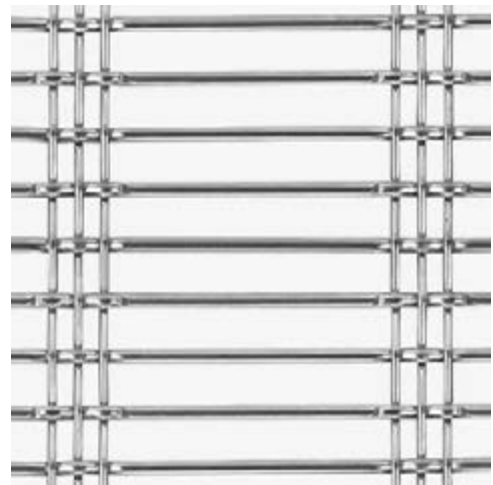

Open area:
20-95 %.

METAL FACADES

Facade systems dedicated
to SCREEN DECO welded grids

HANGER SYSTEM

DECO HOOK

Take advantage of the unique features of architectural grids and distinguish the facade with the modern aesthetics. Take care of the details with rounded corners and variable open area.

The HOOK system is dedicated to fixing welded grids made of profile wires with a triangular cross section. The facade panels are hung on the support structure with special locks cut in the grid crossbars, which ensures fast and simple installation. A unique solution is the ability of obtaining a variable slot on the same panel. Natural ventilation of the facade reduces the risk of overheating of the inter-facade space in double layer facade construction.

Wide range of different width **profiles**.

Bespoke slot selection available.

Mounting system as in ventilated facades.

Max. panel size:
2 000 × 3 000 mm.

Open area:
20-95 %.

ARRAS D08100.
SCREEN DECO
product line.

FRAMELESS SYSTEM

DECO PP

Save money by quickly mounting the panels directly to the building wall*. Take advantage of the grid structure and revitalise the facade with a green element.

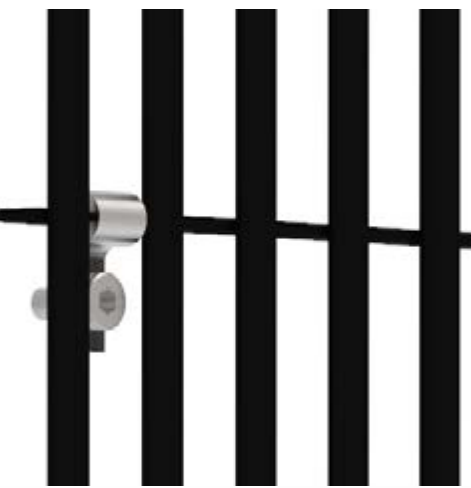

The PP system allows for fixing architectural welded grids made of profile wires with a triangular cross section. Direct mounting ensures maximum proximity to the building wall. Dedicated as a substructure for living green facades in facilities. A unique solution is the ability of obtaining a variable slot on the same panel.

* For the installation of DECO panels, a substructure, designed according to Progress Architecture guidelines, is required
